UCSF Memory and Aging Center Alzheimer's and Dementia Care ECHO Program

A collaboration between UCSF Memory and Aging Center (MAC) and the Alzheimer's Association, this ECHO series will cover key aspects of dementia care, including detection, diagnosis, and management in the primary care setting. Each hour consists of brief lectures followed by in-depth case consultations on challenging patient cases brought by the primary care providers. Participants will receive guidance and

support for disease management in their clinic setting from local disease experts in dementia care and other primary care providers. This series is open to primary care providers. See website for more information and to be added to the waitlist.

AFA prides itself on offering innovative, engaging, and practical training and educational programs to professional care partners. Our training philosophy is rooted in the belief that optimal dementia care relies on building relationships. This person-centered approach to care values promotes the unique strengths, goals, and humanity of each individual, involves interdisciplinary collaboration among care providers, and places individuals with dementia and their families at the center of decision-making.

A Public Health Approach to Alzheimer's and Other Dementias is an introductory curriculum that is intended to increase awareness of the impact of Alzheimer's disease and other dementias as well as the role of public health. This curriculum addresses cognitive health, cognitive impairment, and Alzheimer's disease and is intended for use by undergraduate faculty in schools and programs of public health and other related disciplines. This work supports The Healthy Brain Initiative: The

Public Health Road Map for State and National Partnerships (Road Map) in its goal of developing a competent workforce. The curriculum is available free of charge and consists of four modules that are designed to be used individually or as a whole each with slides and a faculty guide.

Yale School of Medicine

<https://medicine.yale.edu/adrc/education/professional/>

Alzheimer's disease is the leading cause of dementia and exacts a formidable emotional and financial toll on patients, caregivers, and society. This elective will review the neurobiology, clinical features, and pharmacological treatment of Alzheimer's disease. The differential diagnosis of Alzheimer's disease will also be discussed with sessions on other etiologies of dementia, including Lewy Body Dementia, Frontotemporal Dementia, and Vascular Dementia. The neuroanatomic substrates and routine clinical assessment of geriatric cognitive disorders will be introduced. Major clinical syndromes, including amnesic disorder and Alzheimer's dementia, will be illustrated via videotaped interviews.
